HomeStyle — Screen Descriptions by Role

For Design Team Use · v1.0 · April 2026 *Companion to: UI Specification by Role v1.0 (field-level validation, states, error messages)*

> **How to use this document:** The UI Spec (Word doc) tells the designer *what* to validate and *what colour* each badge is. This document tells the designer *what each screen looks like, what it feels like to use, and what the designer needs to prioritise*. Read this first before opening Figma. Every screen description follows the same structure: Layout → Visual hierarchy → Key interactions → What must be unmissable → Edge cases to design for.

Brand Direction

HomeStyle is a **premium design furniture platform** — not mass-market, not discount. The visual language should feel like a well-designed interiors magazine meets a confident luxury e-commerce experience. Think Dezeen, not IKEA. Informed restraint, not minimalism for its own sake.

Storefront: Generous whitespace. High-contrast editorial typography. Warm off-white backgrounds (`#F5F5F0`). Gold (`#B8860B`) used sparingly as a signal of quality, not decoration. Product photography dominates — the UI exists to serve the image, not compete with it.

Admin panel: Purposeful density. Dark sidebar (`#1A1A1A`) grounds the experience. Content area is warm off-white. Gold reserved for active states and alerts that need attention. No decorative elements — every pixel earns its place.

Table of Contents

1. Role: Guest / Visitor
2. Role: Registered Customer
3. Role: Verified Trade Account
4. Role: Admin — Operations
5. Role: Admin — Content
6. Role: Admin — Trade
7. Role: Super Admin

Role 1: Guest / Visitor

> **Who they are:** An unauthenticated person browsing the HomeStyle storefront. They have not logged in and may not have an account. They can see everything a customer sees *except* trade pricing. Their cart lives in a Redis session cookie — it will survive for 30 days but is not tied to an account. Their primary jobs: discover products, evaluate them in detail, and decide whether to buy.

SCR-G-01 · Homepage

Layout: Full-width hero section at the top — a single large editorial image (lifestyle shot of a furnished interior) with a headline and a single CTA button ("Explore the collection"). Below the fold: a 3 or 4-column grid of featured collections (Living Room, By Designer, New Arrivals, Outdoor). Below that: a curated "Designer Picks" section — 3 products side by side with generous spacing. Footer last.

Visual hierarchy: The hero image is the dominant element — it sets the brand tone before any product is shown. The collection grid below it is the real navigation. "Designer Picks" acts as editorial curation, not a standard product grid.

Key interactions:

- Hovering a collection card lifts it slightly (subtle box-shadow transition, 150ms) and reveals the collection name overlaid at the bottom of the image.
- The navigation header is transparent over the hero, becoming a solid white bar with shadow on scroll.
- No persistent cart icon visible in the header until the guest adds an item. Once added, a cart icon appears with an item count badge.

What must be unmissable: The hero image and its CTA. This is the brand's first impression — if the hero image is wrong in size or compression, the whole page fails.

Design notes: The homepage is SSR-rendered. Meta title and og:image are critical for social sharing. Design the og:image as a dedicated 1200×630 asset, not a crop of the hero.

SCR-G-02 · Collection Listing Page

Layout: Fixed-width content container (max ~1280px, centred). Left panel: filter sidebar (~260px wide, sticky on desktop). Right: product grid. Grid: 3 columns on desktop, 2 on tablet, 1 on mobile. Each product card: image (aspect ratio 4:5 or square depending on product type), product name, designer credit in smaller muted text below, price, star rating.

Visual hierarchy: Product images are the page. The filter sidebar is subordinate — present but not dominant. The page title ("Living Room Sofas") is a clean editorial heading, not a massive banner.

Key interactions:

- Filter chips at the top of the content area (not just in the sidebar) allow quick one-click filtering by material, lead time, availability, and price range.
- Sort dropdown: top right of the product grid, aligned with the first product card.
- Infinite scroll OR "Load more" button — design team to propose. Client preference is "Load more" to maintain predictable scroll position after navigating back from a product page.
- Price displayed in the user's detected currency (USD for .com US, EUR for EU users). No currency switcher needed in Phase 1 unless OD-02 is resolved as live rates.

Product card states to design:

- Default state
- Hover state: image zoom (scale 1.03, overflow hidden, 300ms ease)
- "Low Stock" amber badge overlaid bottom-left of image
- "Out of Stock" red badge — card still clickable, Add to Cart not shown on card
- "Made to Order" blue badge
- Trade price indicator: *not shown on listing page for guests* — design this for authenticated trade accounts only

What must be unmissable: The product image. Every card must load fast — design with skeleton loading state (shimmer, 3–5 placeholder cards while data loads). Never show an empty grid.

SCR-G-03 · Product Detail Page

Layout: Two-column layout on desktop. Left column (~55% width): image gallery. Right column (~45%): all purchase-decision content. Below the fold (full width): description, dimensions table, designer bio section, reviews.

Left column — image gallery: A large primary image. Below it: a horizontal row of thumbnail images (up to 12). Clicking a thumbnail swaps the primary image. The primary image supports pinch-to-zoom on mobile. Material/finish swatch selection (in the configurator on the right) should *change the primary image* to the corresponding material photograph.

Right column — content (reading order top to bottom):

1. Designer credit (small, muted, links to designer profile)
2. Product name (H1, large, bold)
3. Price — large, prominent. "Inc. VAT" or "Exc. tax" label in smaller muted text below.
4. **Star rating** — click scrolls to reviews section
5. **Configurator** — this is the most complex UI element on the page. Each dimension renders differently:
    - *Material / Finish:* Swatch grid (small circular or square colour/material swatches with labels on hover). Selecting a swatch highlights it with a gold border.
    - *Fabric Grade:* Radio group with label and brief description (e.g. "Grade A — Standard linen blend" / "Grade B — Premium linen")
    - *Base Type:* Text radio group or small illustrated options
    - *Size:* Button group (e.g. "2-seat / 3-seat / Corner / 2.4m / 2.8m")
    - All selections update price, lead time, and stock badge *in real time* without page reload
6. **Lead time** — directly below configurator. Format: "Lead time: 8–12 weeks" in muted text. When stock is available: "In stock — dispatched within 48 hours". This is *locked* when the customer starts checkout.
7. **Stock badge** — see colour spec in UI Spec doc. Immediately visible, never buried.
8. **Add to Cart** button — full width of right column. Primary gold CTA. This is the single most important button on the page.
9. **"Notify Me" button** — replaces Add to Cart when out of stock. Same width. Muted styling.
10. **Delivery checker** — below Add to Cart. Compact row: ZIP/postal input (inline) + "Check delivery" button. Result drops below the input. Not dominant — it's a helper, not the primary CTA.
11. **Spec PDF download link** — smaller, muted. Icon + "Download specification PDF". Trade accounts see full resolution version.

Below the fold sections:

- Product description (rich text, full width)
- Dimensions table (width, depth, height, weight — both mm and inches)
- Designer bio (image + text, editorial layout)
- Reviews (aggregated rating + individual review cards)

What must be unmissable: The configurator, Add to Cart button, and lead time. A customer who doesn't see the lead time before checkout will be surprised and may return the order. Make it visible *before* the CTA, not after.

Edge cases to design:

- Product with no configurator (single configuration): skip the configurator entirely, show price and stock directly
- All configurations out of stock: Add to Cart replaced with Notify Me for all
- Spec PDF link loading state (TC-09: takes a moment to generate presigned URL)
- Mobile: right column stacks below left column. Configurator must be fully usable on touch with 44px minimum tap targets on all swatch options

---

SCR-G-04 · Shopping Cart

Layout: Standard checkout funnel layout. Two columns on desktop: left (~65%) = cart line items. Right (~35%) = order summary panel (sticky). On mobile: stacked, summary below items.

Left — line items: Each line item is a horizontal card: product thumbnail (square, 80px), then product name + full configuration description in smaller text below (e.g. "Walnut frame / Natural oil finish / Grade B Linen / 2.4m"), then lead time for that configuration ("Lead time: 8–12 weeks"), then quantity control (minus, number, plus), then unit price, then line total. A remove (×) icon sits top-right of each card.

Right — summary panel:

- Cart subtotal (estimate, exc. tax)
- Lead time summary ("Longest lead time in your cart: 8–12 weeks")
- "Proceed to Checkout" button — full width of panel, gold, prominent
- Below: small text "Shipping and taxes calculated at checkout"

Key interactions:

- Quantity minus at 1 prompts implicit remove (no modal — just removes with a 5-second undo toast)
- Out-of-stock warning appears as a red inline message below affected line items (checked on page load)
- Cart is persistent: guest gets a 30-day Redis session, registered customer gets DB persistence

What must be unmissable: The lead time per line item. This is premium furniture — customers need to see delivery lead times before committing to checkout, not be surprised post-payment.

SCR-G-05 · Registration

Layout: Single-column centred form. Max width ~480px. Logo at top. Form card with generous internal padding. Below the form: "Already have an account? Log in" link.

Visual hierarchy: Clean, uncluttered. The form is the only content on the page. No distracting navigation or product suggestions. This is a commitment screen.

Key interactions:

- Password strength indicator: a progress bar and a small checklist (8+ characters / Uppercase / Number) that animate as the user types. Rules go green as they're met. Submit button stays disabled until all green.
- All fields validated on blur (when the user leaves a field), not on submit. Inline errors appear directly below the relevant field.
- T&C checkbox: the only checkbox on the form. Label includes a hyperlink to /terms. Checked state uses gold checkbox styling.

Post-submit state: Full-page confirmation — not a modal, not a banner. Replace the form entirely with a clean message: "Check your email". This moment should feel reassuring and premium, not like a system notification.

Edge cases to design:

- Email already registered: inline error with a link to /login
- Resend verification email (rate-limited to 3 per hour — don't show a loading spinner every time, it may silently succeed or silently not send)

SCR-G-06 · Login

Layout: Same single-column centred layout as Registration. Max ~480px. Logo, form card, "Don't have an account? Register" below.

Visual hierarchy: Email + password fields. Two social login buttons (Google, Facebook) below a thin "or" divider. "Forgot password?" link directly below the password field — small, muted, easy to find but not dominant.

Key interactions:

- Social login buttons are full-width, with correct brand icons (Google's official coloured icon, Facebook's blue). These are not just text links.
- On failed login: a form-level error banner appears *above* the form fields, not below them. It replaces itself on each attempt.
- On TC-10 lockout (5 failed attempts): the error banner shows a countdown and the submit button is disabled. The countdown is live (ticking).

What must be unmissable: The "Forgot password?" link. Hiding it costs support tickets.

SCR-G-07 · Forgot Password

Layout: Same single-column layout. One field (email). One button ("Send reset link"). This is the simplest form in the system.

Key behaviour: After submit, *regardless of whether the email exists in the system*, show the same confirmation message. Never reveal whether an email address is registered. The confirmation page is clean and reassuring: "If this email is registered, you'll receive a link shortly."

Edge cases to design: Reset link expired page (amber warning, "Request a new link" button). Used reset link page (grey message, redirect to login after 3 seconds).

Role 2: Registered Customer

> **Who they are:** A user who has created and verified an account, logged in via email/password or OAuth. They have a persistent cart, order history, wishlist, and can submit reviews. They *cannot* see trade pricing. The authentication state is transparent to them — they just experience a richer, personalised platform.

All guest screens apply, with the following differences and additions.

SCR-C-01 · Account Dashboard

Layout: A personal hub page. Not a dashboard in the admin sense — it is more like a welcome page with recent activity. Top: a warm greeting with the customer's first name ("Welcome back, Alexandra"). Below: a 3-column card grid showing: "Your last order" (status + summary), "Wishlist" (count of saved items), "Returns" (count of open return requests, or a "No open returns" empty state). Below that: a "Recent orders" list (last 3 orders, compact format).

Visual hierarchy: The greeting establishes personal connection. The three cards give at-a-glance status. The orders list is the most actionable section.

Key interactions: Each card links to the respective full page (/account/orders, /account/wishlist, /account/orders with return filter). The "Recent orders" list has an "Order #", status badge, date, and a "View order" link per row.

SCR-C-02 · Order History

Layout: Single-column list. Each order is a card (not a table row) — this gives more room for configuration detail, which is critical for premium furniture. Each card shows: order number + date on the left, status badge on the right, below that: a 2–3 line item summary ("Elan Sofa — Walnut / Natural oil + 2 more items"), total price, and a "View order" link.

Pagination: Load more button at the bottom. 20 orders per page. Most recent first.

Empty state: "You haven't placed any orders yet." with a CTA to browse collections. Not just blank space.

SCR-C-03 · Order Detail

Layout: Two-column on desktop. Left (~60%): order content. Right (~40%): status panel and timeline.

Left column:

- Order header: order number (bold, H2), placed date, delivery address, payment method (masked card).
- Line items — each item is a detailed card: product thumbnail, product name, *full configuration detail* (e.g. "Walnut frame / Natural oil finish / Grade B Linen / 2.4m"), SKU in small muted text, lead time at time of order ("Lead

time confirmed at checkout: 8–12 weeks"), quantity, unit price, line total.
- Order totals: subtotal, shipping (with delivery method name), tax breakdown, total.

Right column:

- Status badge (large, prominent)
- Status timeline: vertical list of steps from "Payment confirmed" through to "Delivered". Each step has a dot (filled = done, gold = current, grey = pending), label, and date/actor when completed.
- Tracking button: appears when status = dispatched. Links to carrier tracking. White-glove delivery: shows scheduled appointment window instead of / alongside tracking link.
- "Request Return" button: appears only when status = delivered AND within TC-19 window (30 days). Hidden entirely when outside window.

What must be unmissable: The lead time confirmed at checkout. Customers who ordered a made-to-order piece 6 weeks ago may have forgotten the timeline — showing it prominently prevents anxiety contacts to support.

SCR-C-04 · Checkout — Address & Delivery Step

Layout: Checkout funnel — full-page, no distracting navigation header (simplified header with logo + progress indicator only). Two-column on desktop: left = form. Right = locked order summary panel (items, configuration details, lead times — read-only at this point).

Top of page — inventory hold countdown (TC-13): This element is *hidden* until 5 minutes remain on the 15-minute hold. When it appears, it drops in from the top as an amber sticky banner: "Your items are reserved for **4:58**". This is a live countdown. At zero, a modal interrupts the user: "Your reservation expired. Your items are back in your cart." The modal has one button: "Return to cart". There is no way to continue — the session is dead.

Form:

- Step 1 of 2: Address. Standard address form fields. ZIP/postal code field shows inline validation after blur (format check client-side, serviceability check on submit).
- Once address is entered and valid: delivery method options appear below the form. Not a new page — they appear inline via an API call.
- Delivery methods render as a radio group. Each option: delivery type name, description, price, estimated date range. White-glove option (if available): gold left border, "Recommended for large furniture" label.
- Below delivery methods: "Continue to Payment" button.

Right panel — locked summary: Shows items with configuration detail and individual lead times. This panel is entirely read-only. At the bottom: "Lead times confirmed at checkout" label. This is important: the customer is implicitly agreeing to the lead time by continuing.

SCR-C-05 · Checkout — Payment Step

Layout: Same two-column structure. Left: payment form. Right: same locked order summary, now with tax and shipping added.

Left column:

- Discount code: small collapsible section ("Do you have a discount code?" → expands to show input field + Apply button). After applying: shows discount line in summary panel. Trade-only code used by non-trade account: inline red error "This code is available to verified trade accounts only."
- Tax breakdown: shown directly below the totals. US: "Sales tax (CA, 9.5%): $[X]" as additional line. EU consumer: "Includes [rate]% VAT: €[X]" as informational line. EU trade VAT-exempt: "VAT exempt (B2B reverse charge): €0.00" with a small info icon explaining this.
- Stripe Elements iframe: occupies the main payment area. Styled via Stripe Appearance API to match brand (Arial font, gold focus ring, dark border). Available methods shown as tabs: Card / Apple Pay / Google Pay / iDEAL (NL) / SEPA (EU) — only relevant methods shown based on billing country.

- "Place Order" button: primary gold, full-width. Immediately below Stripe Elements. On click: shows a loading spinner inside the button. TC-15: if no response within 30 seconds, the button returns to its default state and an amber banner appears above the form.

What must be unmissable: The total. The customer needs to see the exact final total — including tax — before clicking Place Order. If the number surprises them here, they abandon.

SCR-C-06 · Order Confirmation

Layout: Single column, centred, clean. This is a celebratory moment.

Content structure:

1. A large checkmark icon (gold circle, white tick — not a standard browser default)
2. Headline: "Your order is confirmed."
3. Order number (large, copyable)
4. Brief summary: items ordered, total paid, delivery address, estimated lead time
5. "View your order" button → /account/orders/[orderId]
6. "Continue shopping" link below the button

Background: The order confirmation email (E-03) is sent at this moment. The page shows a subtle note: "A confirmation email has been sent to [email]."

Edge case to design: If the page loads before the Stripe webhook has created the order (a rare race condition), the page shows a neutral message: "Your payment was received — your order is being processed. Check your email or your order history in a few minutes." No red error. Not alarming. This should *not* look like a failure.

SCR-C-07 · Wishlist

Layout: Top: wishlist name (editable inline) + "Share wishlist" button (top right). Below: product grid — same card format as collection listing, but with additional "Move to Cart" and "Remove" controls on each card.

Product card in wishlist:

- Product image
- Product name + configuration detail ("Walnut / Natural oil / Grade B Linen / 2.4m")
- Price (current RRP — may have changed since wishlisting)
- Lead time
- Stock status badge
- Two inline buttons: "Move to Cart" (primary, gold) and "Remove" (muted text link, not a button — this prevents accidental removal)
- If out of stock since wishlisting: red "Out of Stock" badge. "Move to Cart" replaced with "Notify Me".

Share wishlist: A small modal appears: "Your shareable link:" + the URL + a "Copy link" button. Simple and clean. Not a full-page view.

Empty state: Large, warm. "Your wishlist is empty." — with a CTA to browse. Not a technical-looking empty state.

SCR-C-08 · Return Request Form

Layout: Single-column form. Accessed from the order detail page via the "Request Return" button (visible only within TC-19: 30-day window).

Context banner at top: A warm amber/gold info box: "You're requesting a return for order HS-2026-004821, placed on 25 March 2026. Returns must be requested within 30 days of delivery ([deadline date])." This anchors the customer's context and sets expectations before they start the form.

Form content:

1. **Items to return** — a checklist of eligible line items from the order. Each item shown with: thumbnail, product name, configuration summary. Made-to-order items shown with a note "(exchange or store credit only — see Returns Policy)" per OD-08 default. Non-returnable bespoke items shown greyed out with reason.
2. **Reason** — a styled dropdown (not browser default). Clear labels.
3. **Additional notes** — a textarea. Required if reason = "Other".
4. **Photo upload** — drag-and-drop zone or file picker. Shows previews after upload. Required if reason = "Damaged on arrival".
5. **Submit button** — "Submit Return Request". Primary gold.

Below the submit: A plain text summary: "What happens next: An admin will review your request within 2 business days. You'll receive an email when a decision has been made." Sets expectations, reduces follow-up contact.

SCR-C-09 · Account Settings (Profile, Addresses, Security)

Layout: Settings page with a left sub-navigation (Profile / Addresses / Security). Each section loads in the right content area without a full page reload.

Profile tab: Name, email, phone. Email change: a note appears after submitting a new email: "A verification link has been sent to [new email]. Your email won't change until you click the link." Current email remains active.

Addresses tab: List of saved address cards (max 10). One card is marked "Default" with a small green badge. Each card: edit button + delete button. "Add new address" button at the top. Delete confirms inline (no modal for non-default addresses — just a confirmation link "Are you sure? This can't be undone." appears inline).

Security tab: Change password form. Below that: "Active sessions" — a table showing device type, location/IP, last active, and a "Log out" button per row. "Log out of all other devices" button at the top of the table.

Role 3: Verified Trade Account

> **Who they are:** An authenticated B2B user — interior architect, interior designer, or corporate buyer — whose trade account application has been approved by an admin. They have all customer capabilities plus trade-specific features. They use the platform *professionally*, often managing multiple client projects simultaneously. Their primary concern is specifying and ordering correctly, not browsing for inspiration.

All registered customer screens apply with the differences listed in the UI Spec doc. Below are trade-specific screens.

SCR-T-01 · Trade Portal Home

Layout: A dashboard-style landing page for verified trade accounts, accessible from the main navigation. It replaces the standard /account page as the authenticated home.

Content structure:

- Top: a professional greeting with the company name, trade tier, and account manager details (name + email/phone). This should feel like a B2B relationship, not a consumer account page.
- "My Projects" section: a 3-column grid of named project wishlists. Each project card: wishlist name, item count, last updated date, "View project" link, "Share with client" link.
- "Recent orders" section: last 5 orders in a compact table — order number, items summary, total (trade price), status badge. "View all orders" link.
- "Quick actions" section: three prominent buttons — "New project", "Browse catalogue", "Download spec PDFs".

Visual tone: More professional and utilitarian than the consumer account page. Less warmth, more efficiency. But still premium — this is not a barebones B2B portal.

SCR-T-02 · Project Wishlists (Trade)

Layout: List of named wishlists. Each wishlist is a full-width card with: project name (editable), item count, total value (at trade pricing), last updated, client share link status ("Shared with client" or "Not shared"), and action buttons.

Creating a new project: An inline "New project" button. Clicking it inserts a new card at the top with an editable name input already focused. Customer presses Enter or clicks away to save the name.

Individual project wishlist page:

- Product grid same as consumer wishlist, but with **trade pricing** shown instead of RRP.
- Spec PDF download link per item (full resolution for trade accounts).
- "Convert all to cart" button: a prominent CTA at the top of the page. Adds all in-stock items to cart in one action. Made-to-order and out-of-stock items flagged for individual attention.
- "Share with client" generates a read-only view URL (/wishlist/[shareToken]) — client does not need a HomeStyle account to view it. The shared view shows product images, names, configurations, and RRP (not trade pricing) — trade pricing is confidential.

SCR-T-03 · Trade Account Application

Layout: Single-column form. Accessed from a prominent "Apply for a trade account" CTA shown to logged-in non-trade customers on the /trade landing page and on the product detail page (where "Trade prices available — apply here" is shown instead of the trade price).

Form: Company name, profession type (select), VAT/tax number, portfolio URL, intended use (textarea). Minimal fields — the admin will review the portfolio URL to verify legitimacy.

Post-submit state: A clean confirmation page: "Your application is being reviewed. We'll be in touch within 2 business days." A progress indicator showing the two steps: "Application submitted" (checked) and "Account activated" (pending). This sets expectations and reduces follow-up emails.

Role 4: Admin — Operations

> **Who they are:** An operational team member who processes orders, manages returns, updates stock, and manages shipping. They never see product content creation tools, CMS, or financial configuration. Their working environment is the admin panel — a dense, data-rich interface optimised for speed and accuracy. They may process dozens of orders per day.

SCR-A-01 · Admin Login + 2FA

Layout: Same centred single-column layout as the customer login, but with the admin branding treatment: dark background (`#1A1A1A` page bg instead of white), gold "HOMESTYLE ADMIN" wordmark. The form card itself is dark-toned — this visually signals "you are in the admin environment".

Two-step flow: Step 1: Email + password. On success, the password fields fade out and a new section slides in (same card, animated) for Step 2. Step 2: A single large 6-digit input for the TOTP code. Hint text: "Open your authenticator app and enter the 6-digit code." Auto-submit when 6 digits are entered (no need to press Enter).

TC-11 lockout: After 3 failed attempts, the entire form is replaced with a locked state: large padlock icon, red-toned message, countdown timer, "Contact your Super Admin to unlock your account." This is deliberately more severe than the customer lockout (5 attempts) — admin accounts need stricter protection.

SCR-A-02 · Admin Dashboard

Layout: Four KPI cards at the top (full-width row). Below: two panels side by side — SLA compliance and System alerts. Below that: a revenue chart (full width). Sidebar is permanently visible on the left.

KPI cards: Today's revenue / Orders today / Pending trade applications (amber if > 0) / Low-stock alerts (red if > 0). Each card: muted label, large number, small delta vs yesterday. Numbers that need attention are in amber or red.

SLA compliance panel: A compact table. Five rows: Order confirm (TC-17) / Dispatch in-stock (TC-18) / Return review (TC-21) / Refund initiation (TC-22) / Trade review (TC-TRA-01). Each row: label, percentage compliance, fraction (e.g. "24/25"). Percentage colour: green ≥95%, amber 80–94%, red <80%. Clicking a row navigates to the relevant filtered list with "Overdue" filter pre-applied.

System alerts panel: A list of the most recent unacknowledged alerts. Each alert: a coloured dot (red = critical, amber = warning, blue = informational), a one-line description, a timestamp, and the category (Ops / Finance / Trade / Inventory). The entire alert row is clickable and navigates directly to the affected record.

Revenue chart: A simple bar chart. 7 bars (last 7 days). Today's bar in gold, previous days in pale gold. Below the chart: 7-day total, B2C vs Trade split, percentage change vs previous 7 days. The chart does not need to be interactive — it is a glance metric, not an analytics tool.

What this dashboard must communicate in under 5 seconds: Are there any SLA breaches? Are there any critical alerts? What is today's revenue? Everything else is secondary.

SCR-A-03 · Order List

Layout: Full-width table within the main content area. Above the table: a search bar (left) and filter chips (right). The table has 6 columns: Order #, Customer, Total, Status, SLA, Action.

Row colour coding — this is non-negotiable:

- Default: white background
- SLA approaching (<1 hour remaining): amber tint (`#FFFAF5`) row
- SLA breached: red tint (`#FFF8F8`) row This means the ops team can scan the list visually without reading every SLA value.

SLA column: Shows a live countdown for active orders. "3h 12m left" in green. "0h 48m left" in amber. "Overdue 2h" in bold red. Made-to-order items show "8–12 wks" (lead time range) instead of a countdown — because their dispatch SLA starts from production completion, not order placement.

Action column: Context-sensitive button. The button label reflects the most logical next action for that row's current status. This eliminates the need to open the detail view for routine status progression:

- Status = Confirmed → "Process" button
- Status = Processing → "Dispatch" button (turns red if SLA breached)
- Status = Dispatched → "Track" link
- Status = Delivered → "View" link
- Status = Return Requested → redirect to returns queue

Filter chips: All / Confirmed / Processing / Dispatched / Delivered / Overdue (red chip — prominent). Additional toggles: White-glove / Made-to-order / Trade.

Trade indicator: Trade orders show a small amber "Trade" badge inside the customer cell — not a separate column. Keeps the table narrow.

SCR-A-04 · Order Detail

Layout: Two-column. Left (~60%): commercial record. Right (~40%): operational workflow.

Left column:

- Order header: order number (H2), status badge, placed date, delivery address. If TC-18 is overdue: a red "TC-18 OVERDUE" badge sits next to the order number. Impossible to miss.
- Line items: each item is a detailed card. Product thumbnail + name + *full configuration text* (e.g. "Walnut frame / Natural oil finish / Grade B Linen / 2.4m") + SKU in monospace text + lead time confirmed at checkout. Qty, unit price, line total.
- Order totals: subtotal, trade discount (if trade order), shipping with method name, tax breakdown, total paid.

Right column:

- **Status timeline:** Vertical steps. Done steps: green filled dot. Current step: gold filled dot + bold label. Pending steps: grey circle. Each done/current step shows date, time, and actor (e.g. "25 Apr, 15:44 · Admin: J. Clarke"). If SLA breach on current step: red text showing how much it's overdue.
- **Dispatch form** (shown when status = Processing): carrier select, tracking number input, white-glove delivery window input (free text). "Confirm dispatch" button — full width, gold. Note below: "This will send the shipping confirmation email to the customer."
- **Customer & delivery panel:** customer name, account type (Registered / Trade), delivery address, delivery method, payment method (masked).
- **Admin notes textarea:** internal notes, not visible to customer. Auto-saved every 60 seconds. Timestamped entries visible below the textarea.

Topbar actions (top right of page): "Print packing slip" / "Download invoice" / "Mark dispatched" (primary action, duplicated for efficiency — saves scrolling to the right column form).

SCR-A-05 · Returns List

Layout: Same structure as order list. Table with filter chips. Columns: Return #, Order / Customer, Item(s), Status, SLA.

SLA column for returns: TC-21 countdown (time to review). Same colour rules as orders. Overdue items sorted to top automatically.

Overdue banner: When any return has breached TC-21, a red banner appears at the very top of the list content area (above the filter chips): "2 return requests are overdue — TC-21: 2 business day review SLA exceeded." This is not dismissible. It disappears only when all overdue items are actioned.

Approve/Reject inline: For items with status "Under Review", both an "Approve" and "Reject" button appear directly in the SLA column — no need to open the detail view for straightforward decisions.

"Mark received" button: Appears in the SLA column for "Approved — item in transit" rows. Clicking this starts the TC-22 countdown (1 business day to initiate refund).

Photos indicator: If the customer uploaded return photos, a small "📷 [N] photos" link appears in the Items column. Clicking opens a lightbox.

Made-to-order / trade labels: Same as order list — shown inline in the customer cell, not as separate columns.

Role 5: Admin — Content

Who they are: A team member responsible for the product catalogue, collections, CMS pages, promotions, and review moderation. They never see orders, customers, or financial data. Their primary tool is the product

form — which is the most complex form in the admin panel.

SCR-B-01 · Product List

Layout: Table with search and filter. Columns: Thumbnail, Product name, Collection(s), Configurations (count), Price range (USD), Status badge, Last updated, Actions.

Filter chips: All / Draft / Published / Archived. Search: product name or SKU.

Status badges: Draft (grey), Published (green), Archived (grey, strikethrough treatment optional).

Actions column: "Edit" / "Archive" (with confirm) for Published products. "Publish" for Draft products. No Delete — products are archived, not deleted (to preserve order history integrity).

SCR-B-02 · Product Form (Create / Edit)

Layout: Two-column. Left (~65%): core content and configurations. Right (~35%): images, spec PDFs, pricing summary. Sticky topbar with "Save draft" and "Publish" buttons always visible.

Left column — sections (collapsible on mobile, always expanded on desktop):

Core details section: Standard form fields — product name, description (rich text editor), designer credit (searchable select), collections (multi-select with tags), dimensions (3 number inputs in a row, auto-converted to inches in muted text below), weight.

Configurations section — this is the most complex UI element in the admin panel: A list of configuration cards. Each card is an expandable panel. In collapsed state it shows: the configuration's main attributes as a summary line + status badge + stock qty. In expanded state it shows all editable fields:

- SKU (monospace input — visually distinct to signal this is a code, not a name)
- Price per currency (3 inputs side by side: USD, EUR, GBP) + Trade price (USD)
- Stock qty + "Made to Order" toggle
- Lead time text input
- Attribute tags (a tag input UI: type a value, press Enter, a removable tag appears)

The "Add configuration" button at the bottom of the section always visible. Configurations can be reordered (drag handle on the left of each card).

Right column:

Images section: A 3-column grid of image slots (square aspect ratio). First slot = primary listing image (indicated by a subtle gold border + "Primary" label). Each slot: hover to reveal "Replace" and "Remove" buttons. An "Add image" slot (dashed border, plus icon) always visible after the last image. Drag between slots to reorder.

Swatch images section: A smaller grid showing material/finish swatch thumbnail images. Each swatch is linked to a configuration attribute value. Clear labelling: "Walnut frame swatch / Natural oil swatch / etc."

Spec PDFs section: Two file upload areas: "Consumer specification PDF" and "Trade specification PDF (full resolution)". Each shows: filename, size, upload date when a file is attached. The trade PDF is clearly labelled "Only visible to verified trade accounts."

Pricing summary panel: A read-only summary: configurations count / price range / in-stock configurations count / made-to-order count / white-glove eligible (calculated from weight).

Publish / Archive controls: "Publish" activates the product — it becomes visible to customers and search-indexed within 60 seconds. "Archive" is destructive enough to require a confirmation: "This product will no longer be visible to customers. All existing orders for this product are unaffected. Are you sure?"

SCR-B-03 · Review Moderation Queue

Layout: Table. Columns: Product (thumbnail + name), Customer, Rating (star display), Submitted, Status, SLA countdown (TC-26: 48h to review), Actions.

Filter tabs at top: Pending (default, with count badge) / Approved / Rejected / Flagged.

Inline review preview: Each row is expandable — clicking the row reveals the full review title and body text inline (accordion pattern) without navigating away. This is essential for efficient moderation: the admin can read and moderate 10 reviews in a row without opening and closing 10 pages.

Action buttons (per row when expanded): Approve (green) / Reject (red — opens a dropdown to select reason) / Flag (amber — sends to Super Admin queue). All inline.

TC-26 SLA column: Same amber/red colour rules as order SLA. At 72 hours, auto-approve fires by default (system does this automatically — the column just shows "Auto-approved" in grey when this happens).

Role 6: Admin — Trade

> **Who they are:** A specialist team member focused entirely on the B2B trade channel. They review trade account applications, approve or reject them, assign account managers, and manage trade pricing. They do not see orders (that is Ops) or product content (that is Content).

SCR-TR-01 · Trade Account Application Queue

Layout: The primary operational screen for this role. Two sections: a "Pending applications" panel at the top, and an "Active trade accounts" table below.

Pending applications panel: When there are pending applications, this panel is the dominant element on the page. Each application is a horizontal card:

- Left: initials avatar (styled circle with the applicant's initials), name, company, profession type, location
- Centre: VAT number, portfolio URL (a "View portfolio" link that opens in a new tab), applied date, SLA countdown
- Right: "Approve" and "Reject" buttons + "View full application" link

Overdue banner: When any application exceeds TC-TRA-01 (2 business days): a red banner at the top: "X application(s) overdue — TC-TRA-01: 2 business day review SLA exceeded." Same pattern as the returns overdue banner.

Inline approval form: When the admin clicks "Approve" on an application card, the card *expands* to reveal an inline form rather than navigating to a new page:

- Pricing tier select (OD-05 dependent — single tier for Phase 1 default)
- Account manager assign (select from configured list)
- Internal notes textarea
- "Confirm approval — send welcome email" primary button
- "Cancel" link

This avoids a page navigation for the most common action (approve). The form is compact and purposeful.

Rejection modal: Clicking "Reject" opens a small modal (overlay on current page):

- "Reason for rejection" — required dropdown (Insufficient portfolio evidence / Unable to verify business / Application incomplete / Business type not eligible / Other)
- "Additional notes" — optional textarea

- "Reject and notify applicant" button — this sends E-11 rejection email automatically

Active accounts table: Below the pending section. Columns: Account holder, Company, Profession, Trade tier, Account manager, Joined date, Total orders (lifetime), Status (Active / Suspended). Search by name or company. Filter by profession type and tier.

Role 7: Super Admin

> **Who they are:** A technical or senior operations owner with unrestricted access to the entire admin panel. They use the dashboard as their primary view and are primarily reactive — responding to escalated alerts, unlocking admin accounts, processing GDPR requests, and configuring system-level settings. They rarely do the day-to-day operational tasks (that is Ops and Content).

All admin screens apply. Below are Super Admin-exclusive screens.

SCR-S-01 · System Settings

Layout: Settings page with a left sub-navigation within the admin panel. Categories: General / SLA Timers / Tax & Shipping / Trade Configuration / Security / Data Retention.

SLA Timers section: A form listing all admin-configurable TC values (per OD-10). Each TC has:

- A label (e.g. "Order confirmation SLA — TC-17")
- A number input with unit label (e.g. "4 business hours")
- A brief description of what changes when this value is altered
- A "Last modified by [admin name] on [date]" audit note in muted text below

Design note: This is a high-stakes form. A change to TC-19 (return window) has legal implications. Every field should have a visible "What does changing this do?" helper text visible by default (not hidden behind a tooltip). At the bottom of the section: a single "Save all SLA settings" button — not one save button per field.

Admin User Management section: A table of admin accounts. Columns: Name, Email, Role badge, 2FA status, Account status (Active/Deactivated), Last login, Actions (Edit / Deactivate / Force 2FA reset / Unlock if locked).

Creating a new admin: Opens a side panel (slide-in from right, 400px wide) with the create form, rather than navigating to a new page. This pattern keeps the admin user list visible in the background for context.

SCR-S-02 · GDPR Erasure Requests

Layout: Table. Columns: Customer name, Email, Request date, TC-34 deadline (30 days from request), Status (Pending / Processing / Completed), Actions.

Status colour: Pending → amber. Processing → blue. Completed → green. TC-34 deadline approaching (<5 days) → red text on deadline column.

Processing a request: Clicking "Process" on a pending request opens a confirmation panel showing exactly what will be anonymised vs. retained (PII fields will be erased, financial order records retained per TC-32). The admin must explicitly confirm: "I confirm this erasure action complies with our GDPR obligations." A checkbox, not just a button.

SCR-S-03 · System Alerts

Layout: A master alert log. Full-width table. Columns: Severity dot (red/amber/blue), Alert message, Category (Ops / Finance / Trade / Inventory / Security), Timestamp, Acknowledged (Yes/No), Actions.

Filter: Show unacknowledged only (default) / All / By category / By severity.

Acknowledge action: Each row has an "Acknowledge" button. Acknowledged alerts move to the bottom of the list (or are hidden in default view). "Acknowledge all" button at the top for bulk clearing.

Alert settings panel: Accessible via "Configure alerts" link. Allows Super Admin to set: email recipients per alert category, Slack webhook URL (optional), and thresholds (e.g. "Alert when low-stock qty falls below [N]").

Appendix: Screen Inventory Summary

Screen code	Screen name	Role(s)
SCR-G-01	Homepage	Guest, Customer, Trade
SCR-G-02	Collection listing	Guest, Customer, Trade
SCR-G-03	Product detail page	Guest, Customer, Trade (pricing differs)
SCR-G-04	Shopping cart	Guest, Customer, Trade (pricing differs)
SCR-G-05	Registration	Guest only
SCR-G-06	Login	Guest only
SCR-G-07	Forgot password	Guest, Customer
SCR-C-01	Account dashboard	Customer, Trade
SCR-C-02	Order history	Customer, Trade
SCR-C-03	Order detail	Customer, Trade
SCR-C-04	Checkout — address & delivery	Guest (if OD-01), Customer, Trade
SCR-C-05	Checkout — payment	Guest (if OD-01), Customer, Trade
SCR-C-06	Order confirmation	Guest (if OD-01), Customer, Trade
SCR-C-07	Wishlist	Customer (1 list), Trade (up to 20 named)
SCR-C-08	Return request form	Customer, Trade
SCR-C-09	Account settings	Customer, Trade
SCR-T-01	Trade portal home	Trade only
SCR-T-02	Project wishlists	Trade only
SCR-T-03	Trade account application	Guest, unauthenticated customer
SCR-A-01	Admin login + 2FA	All admin roles
SCR-A-02	Admin dashboard	All admin roles (filtered by role)
SCR-A-03	Order list	Ops, Super Admin
SCR-A-04	Order detail	Ops, Super Admin
SCR-A-05	Returns list	Ops, Super Admin
SCR-B-01	Product list	Content, Super Admin
SCR-B-02	Product form (create/edit)	Content, Super Admin
SCR-B-03	Review moderation queue	Content, Super Admin
SCR-TR-01	Trade account application queue	Admin — Trade, Super Admin
SCR-S-01	System settings	Super Admin only
SCR-S-02	GDPR erasure requests	Super Admin only
SCR-S-03	System alerts	Super Admin only
